

Spray tanning

Before care

Do not use any products on your skin in the 24hours prior to your treatment including: oils, moisturizers, deodorants, shower gels, bath cremes/gel

Aftercare

- Moisturise daily to help your tan last longer
- During the developing time (typically 8-10hours depending on the choice of tan) , do not participate in any activities which will cause sweating and do not come into contact with water
- When you notice your tan is starting to come off, exfoliation is recommended
- Pat dry after your shower. Vigorous rubbing will exfoliate your skin and your tan will not last as long.
- DO NOT exfoliate with loofas, body scrubs, body washes or soaps with exfoliating beads until your tan starts to fade away.
- Limit the shaving of your legs, as this is also a form of exfoliating. You can still shave your legs, however we do not recommend doing it daily.
- The tan is not going to just disappear, you are going to notice it fading. You can start exfoliating when you notice it is starting to fade and/or in preparation for your next tan.
- Face washes containing salicylic acid and/or benzoyl peroxide are NOT RECOMMENDED because they can eat away at your spray tan. Your face will fade faster as you wash it more frequently.
- Chlorine, hot tubs, saunas and steam rooms will cause your tan to fade a lot faster- within a day or two
